Protein Novel hum

The invention relates to an isolated nucleic acid detection reagent capable of detecting 1000 or more genes from Drosophila. The invention useful in developmental biology and in elucidating cell signalling and cell-cell interactions in higher eukaryotes for the development of insecticides, therapeutics and pharmaceutical drugs. The invention discloses genomic DNA sequences (ABL016176-ABL301511), expressed DNA sequences (ABL016176-ABL301511), expressed DNA sequences (ABL01840-ABL16175) and the encoded proteins (ABB57737-ABB72072). The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published\_pct\_sequences

CC promoter functional in a plant cell, where the promoter is positioned to comprise source. The invention also relates to a transformed plant cell comprising the recombinant DNA construct and a method of producing a crop plant cell transformed plant cell transformed plant cell transformed plant is a crop plant cell as maize or soybean. The method of producing a transformed plant cell thaving an improved property. The plant is a crop plant cell thaving an improved property comprises transformed plant is a crop plant cell thaving an improved property comprises transformed plant, where the cell cylnucleotide or polypeptide is useful for improving plant properties. CC The recombinant DNA construct is useful for producing plant with the cell comproved plant properties, e.g. improved cold, heat or drought tolerance, increased resistance to plant disease, better growth rate by modification of the cell cycle pathway with plant growth regulators, increased resistance to plant disease, better growth rate by modification of the cell cycle pathway with plant growth regulators, increased rate of concent, improved yield by modification of carbohydrate, nitrogen or content, improved yield by modification of carbohydrate, nitrogen or content, improved plant growth and development under at least one stress condition, improved lignin production of photosynthesis or by providing improved plant growth and development under at least one stress condition, improved lignin production of photosynthesis or by growth in invention. Note: The sequence data for this patent did not complete the printed specification but was obtained in electronic company of the printed specification but was obtained in electronic company of the printed specification but was obtained in electronic company of the printed specification but was obtained in electronic company of the printed specification but was obtained in electronic company of the printed specification but was obtained in electronic company of the printed specification because of the company o
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    New recombinant DNA construct comprising a promoter positioned to provi
for expression of a polynucleotide encoding a polypeptide from a
microbial source, useful for producing plants with improved properties.

This sequence shows a protein containing calmodulin/calcium binding motifs which was identified using the method of the invention. The method comprises a computer system for extracting information from biological sequence databases, which receives a motif that defines a desired polypeptide sequence. The computer searches the database based on a que formulated from the motif to obtain a set of polypeptide sequences which are then filtered and a report of the filtered set of polypeptide sequence information is then displayed. The computer system is useful identifying recombinant C.elegans p95.6/YN52 and other mitochondrial
                                                                                                                                                                                                                                                                                                                               New Caenorhabditis elegans mitochondrial calcium-binding protein, p95.6/YN52, identified by protein motif database searching, usefur regulating intracellular calcium ions and in drug screening assay
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         AAB47250
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            AAB47250 standard;
                                                                                                                                                                                                                                                                                 Example
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    26-OCT-2000;

This invention describes novel polynucleotides and polypeptides involved compounds for therapy and diagnosis. Identifying pain-regulating compounds for the protein and/or compress incubating a test compound with a cell, and/or correct, then measuring either binding of test compound to the protein or correct, then measuring either binding of test compound to the protein is one correct, then measuring either binding of test compound to the protein or correct, then measuring either binding of test compound to the protein or correct, then measured either binding of test compound to the protein or correct, then measured either binding of test compound to the protein is one correct, the protein or correct, the protein is one correct, the protein or containing protein interleukin of receptor submit betta, aspartate containing protein, interleukin of receptor submit betta, aspartate protein containing protein interleukin of receptor submit betta, aspartate containing protein spatial protein save protein spatial protein save protein spatial protein spatial correct phosphatase payabatis, 3-hydroxy--methylgluaryl-co A synthase, 12 or UE payabatase, 12 protein, 3-hydroxy--methylgluaryl-co A synthase, 12 or UE payabatase, 12 protein, 3-hydroxy--methylgluaryl-co A synthase, 12 correct phosphatase, 12 protein, 3-hydroxy--methylgluaryl-co A synthase, 12 correct phosphatase, 12 protein, 3-hydroxy--methylgluaryl-co A synthase, 12 correct phosphatase, 12 protein, 13 protein save used factor 6-binding protein, 13 protein spatial used protein synthase, 12 protein, 13 protein spatial used 10 protein, 13 protein spatial used 10 protein, 13 protein spatial protein spatial protein spatial protein spatial protein spatial protein spatial display PCR method (13 protein spatial display PCR method (13 protein spatial protein spatial spatial protein

                                                                                                                                                                                                                                                                                                                                       문
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  obesity, infectious diseases (viral, bacterial, fungal, helminthic, and protozoal), anorexia, cancer, cardiovascular diseases (hypertension, atherosclerosis), neurodegenerative disorders, Alzheimer's disease, parkinson's disease, epilepsy, immune disorders (osteoarthritis), hematopoietic disorders, inflammatory skin disorders, asthma, and various dysliphidemias. The nucleic acids and polypeptides may also be used as targets for the identification of small molecules that modulate or inhibit e.g. neurogenesis, cell differentiation, cell proliferation, hematopoiesis, wound healing and angiogenesis, in gene therapy, in generation of antibodies that bind immunospecifically to NOVX substances for use in therapeutic or diagnostic methods. The nucleic acids are further used as hybridization probes, in chromosome mapping, tissue typing, preventive medicine, and pharmacogenomics. This sequence corresponds to one of the NOVX polypeptides of the invention.

The polypeptides, nucleic acid molecules and antibodies are useful in the manufacture of a medicament for treating a syndrome associated with a human disease, preferably a NOVX-associated disorder. The nucleic acid molecules, polypeptides and antibodies are useful for treating, preventing or diagnosing diseases such metabolic disorders, diabetes, preventing or diagnosing diseases such metabolic disorders, diabetes,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Sequence

cc human disease, preferably a NOVX-associated disorder. The nucleic acid condecules, polypeptides and antibodies are useful for treating, cc preventing or diagnosing diseases such metabolic disorders, diabetes, cobesity, infectious diseases (viral, bacterial, fungal, helminthic, and protozoal), anorexia, cancer, cardiovascular diseases (hypertension, cc atherosclerosis), neurodegenerative disorders, Alzheimer's disease, epilepsy, immune disorders (osteoarthritis), cc hematopoietic disorders, inflammatory skin disorders, asthma, and various cd dyslipidemias. The nucleic acids and polypeptides may also be used as targets for the identification of small molecules that modulate or inhibit e.g. neurogenesis, cell differentiation, cell proliferation, cc hematopoiesis, wound healing and angiogenesis, in gene therapy, in cc generation of antibodies that bind immunospecifically to NOVX substances for use in therapeutic or diagnostic methods. The nucleic acids are further used as hybridization probes, in chromosome mapping, tissue ctyping, preventive medicine, and pharmacogenomics. This sequence corresponds to one of the NoVX polypeptides of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      06-AUG-2002)

The invention describes a recombinant DNA construct comprising a colynucleotide consisting of a sequence encoding an amino acid sequence cavailable in electronic form from the US patent office at ftp.seqdata.uspto.gov/sequence.html?DocID:2004034888. The polynucleotide cof the invention are also useful in physical arrays of molecules and as comproving plant tolerance to cold, heat, drought, herbicides, extreme commotic conditions, pathogens or pests, for manipulating growth rate in commotic conditions, pathogens or pests, for manipulating growth rate in colls by modification of the cell cycle pathway, for conferring increased resistance to plant disease, for producing galactomannan, complant growth regulators, for increasing the rate of homologous recombination in plants, for improving yield by modification of photosynthesis or carbohydrate, nitrogen or phosphorus use and/or uptake corress condition or for modifying seed oil or protein yield and/or content. This is the amino acid sequence of a plant full length insert colypeptide that can be used in the recombinant DNA construct of the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           New recombinant DNA construct, useful for improving plant tolerance to cold, heat, drought, herbicides, extreme osmotic conditions, pathogens pests, for conferring increased resistance to plant disease, or for
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Claim 1; SEQ ID NO 61206; 15pp; English.

The invention useful in developmental biology and in elucidating cell signalling and cell-cell interactions in higher eukaryotes for the development of insecticides, therapeutics and pharmaceutical drugs. The invention discloses genomic DNA sequences (ABI01811), expressed DNA sequences (ABI01810-ABI6175) and the encoded proteins (ABI6777). ABB72072). The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Sequence 520 AA;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Disclosure; SEQ ID NO 18312; 21pp + Sequence Listing; English

                                                                                                                                        CC sequences. (I) is useful as hybridisation probes, polymerase chain of reaction (PCR) primers, oligomers, and for chromosome and gene mapping, and in recombinant production of (II). The polymucleotides are also used in diagnostics as expressed sequence tags for identifying expressed (CC genes. (I) is useful in gene therapy techniques to restore normal (CC activity of (II) or to treat disease states involving (II). (II) is compared to the sequence tags for identifying expressed (CC genes. (I) is useful in gene therapy techniques to restore normal (CC suseful for generating antibodies against it, detecting or quantitating a (CC polypeptide in tissue, as molecular weight markers and as a food (CC supplement. (II) and its binding partners are useful in medical imaging (CC sites expressing (II), (II) and (II) are useful for treating disorders (CC involving aberrant protein expression or biological activity. The (CC diagnostics forensics, gene mapping, identification of mutations (CC and to produce other types of data and products dependent on DNA and (CC amino acid sequences ABG00010-ABG30377 represent novel human diagnostic camino acid sequences of the invention. Note: The sequence data for this case and to produce the printed specification, but was obtained in the printed specification, but was obtained in

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 밁
The invention relates to a complex of protein-protein interactions Co between a Shigella flexmeri polypeptide (e.g. ospB, ospD1, ipaD, ipaC, ipaH), 8, ospG and ospG1) and a mammalian polypeptide defined in the specification. The complexes are formed using the yeast two-hybrid system. Also included are (1) a recombinant host cell expressing the interactions between the Shigella flexmeri polypeptide and a mammalian coplypeptide defined in the specification; (2) selecting a modulating compound obtained from the method of (2); (4) a SID compound that inhibits or activates the protein-protein interactions; (3) a modulating compound obtained from the method of (2); (4) a SID compound cotted interacting domain polypeptide or its fragment or variant comprising the human polypeptides appearing as ABG70042-ABG70242; (5) a Comprising the human polypeptides appearing as ABG70042-ABG70242; (5) a polypucleotide or its fragment or variant comprising the vector; and (10) a protein chip comprising Shigella containing the vector; and (10) a protein chip comprising Shigella containing the vector; and (10) a protein chip comprising Shigella containing the vector; and (10) a protein chip comprising Shigella containing the vector; and (10) a protein chip comprising Shigella containing the vector; and (10) a protein chip comprising Shigella containing the vector are set of the containing Shigella containing the vector are set of the containing Shigella containing the vector comprising Shigella containing the vector are set of the containing Shigella containing the vector and containing the vector comprising Shigella containing the vector comprising the vector compris
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   New complex of protein-protein interactions between a bait Shigella flexneri polypeptide and a prey mammalian or human placenta polypeptide for treating or preventing bacillary dysentery in a mammal or human.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    WPI; 2002-599706/64.

A pharmaceutical composition comprising the compound, polypeptide or polymucleotide is useful for treating or preventing shigellosis (bacillary dysentery) in a human or mammal. The present sequence represents a human prey protein isolated by the yeast two-hybrid assay, forming a complex of the invention with a shigella protein

The cell cycle proteins are capable of promoting cell cycle progression
or cell cycle arrest. They are capable of promoting or inhibiting DNA
crepair. The invention also provides methods for screening a bloactive
egent capable of modulating the cell cycle or interfering with the
cc binding of a cell cycle protein, protein phosphatase type 5 (PPS). The
method involves combining a cell cycle protein and a candidate bloactive
egent and determining the effect on the cell in the presence or absence
cc agent and determining the effect on the cell in the presence or absence
cc of the candidate agent. Cell cycle proteins bind to Rad9 proteins. They
care useful for generating an agonist and antagonist of the cell cycle
cc proteins, both of which are useful in gene therapy and in screen assays.
cc They are useful in the diagnosis and treatment of cancer. The proteins of
cc the invention are used as vaccines. They are useful for generating
cc polyclonal or monoclonal antibodies to the proteins. The present sequence
is a novel cell cycle protein, protein phosphatase type 5 (PPS) of the

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      문
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     overexpressed in cancer tissues compared to normal tissues, and may thus serve as effective targets for the diagnosis and treatment of cancer in mammals. The invention also relates to nucleic acid and polypeptide sequences at least 80% identical to the TAT nucleic acids and cold; an antibody specific for a TAT polypeptide; acid; an antibody specific for a TAT polypeptide; for the treatment or cancer which binds to a TAT polypeptide; fusion proteins comprising a TAT polypeptide; and methods and compositions for the treatment or diagnosis of cancer in mammals. TAT polypeptides, nucleic acids, antibodies, antagonists, binding molecules and compositions are useful for diagnosing or treating a cell proliferative disorder associated with increased TAT expression, particularly cancers such as breast cancer, colorretal cancer, lung cancer, ovarian cancer, liver cancer, bladder cancer, pancreatic cancer, cervical cancer, cancers of the central nervous system, melanoma and leukaemia. TAT nucleic acids may further be used as hybridisation probes, in chromosome and gene mapping, in chromosome identification and in gene therapy. The present sequence

                                                                                                                                                                                                                                                                                                           Ś
                                                                                                                                                                                                                                                                                                                                                                                                                                             The invention discloses a composition comprising two or more isolated rat CC or human polynucleotides or a polynucleotide which represents a fragment, CC derivative or allelic variation of the nucleic acid sequence. Also CC claimed are a vector comprising the nucleotide a host cell comprising the vector, a method for identifying a nucleotide sequence kit to perform the method, an array, a method for identifying an agent ckit to perform the method, an array, a method for identifying an agent that increases or decreases the expression of the polynucleotide sequence cc that is differentially expressed in neuronal tissue of a first animal cc subjected to pain, a method for identifying a compound which regulates the expression of a polynucleotide sequence which is differentially compound that regulates the activity of one or more of the polynucleotides, a method for producing a pharmaceutical composition, a compound that regulates the activity of one or more of the specification, a method for identifying a compound useful in treating complypeptides or their antibodies. The polynucleotide given in the cativity in an animal of one or more of the polynucleotide or the compound that composition comprising the one or more complypeptides or their antibodies. The polynucleotide or the compound that composition comprising the one or more compound useful in treating compound that sactivity is useful for preparing a medicament for treating compound that sactivity is useful for preparing a medicament for treating compound that sactivity is useful for preparing a medicament for treating compound useful in treating compound that sactivity is useful for preparing a medicament for treating compound that sactivity is useful for preparing a medicament for treating compound that sactivity is useful for preparing a medicament for treating compound that sactivity is useful for preparing a medicament for treating compound that sactivity is useful for preparing a medicament for treating compound that sactivity is useful for preparing a m

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Ś
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          8
                                                         The patent discloses nucleotide sequences derived from a plant genome, encoding polypeptides which can be activated as signalling molecules in the signal transduction pathway of plant pathogen resistance, which results from interaction between polypeptide products of a resistance gene and elicitors encoded by an avirulence gene in the pathogen and the protest interacts with the product of the resistance gene. The sequences of the invention are used to activate defence mechanisms against plant pathogens in plants. The present sequence is tomato interactor S-25 (PPS, tetratricopeptide (TPR)-phosphatase) protein fragment
                                                                                                                                                                                                                                                                                                                                                                                                                                                            Nucleotide sequences derived from plant genome and encoding polypeptides which interact with the product of a resistance gene are involved in signal transduction and are useful to activate plant defense against a pathogen.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Tomato; signalling molecule; plant pathogen resistance; resistance gene; avirulence gene; signal transduction pathway; interactor S-25 protein; defence mechanism; PP5; TPR-phosphatase; tetratricopeptide.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  문
             The patent discloses nucleotide sequences derived from a plant genome, encoding polypeptides which can be activated as signalling molecules in the signal transduction pathway of plant pathogen resistance, which results from interaction between polypeptide products of a resistance gene and elicitors encoded by an avirulence gene in the pathogen and the protein interacts with the product of the resistance gene. The sequences of the invention are used to activate defence mechanisms against plant pathogens in plants. The present sequence is tomato interactor S-25 (PPS, pathogens in plants. The present sequence is tomato interactor S-25 (PPS,
                                                                                                                                                                                                                                                                                                                                                                                                  Nucleotide sequences derived from plant genome and encoding polypeptides which interact with the product of a resistance gene are involved in signal transduction and are useful to activate plant defense against a
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Tomato; signalling molecule; plant pathogen resistance; resistance avirulence gene; signal transduction pathway; interactor S-25 protedefence mechanism; PPS; TPR-phosphatase; tetratricopeptide.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    19-MAY-2000;

CT The cell cycle proteins are capable of promoting cell cycle progression

CT or cell cycle arrest. They are capable of promoting or inhibiting DNA

CT repair. The invention also provides methods for screening a bloactive

CT agent capable of modulating the cell cycle or interfering with the

CT binding of a cell cycle protein, protein phosphatase type 5 (PPS). The

CT method involves combining a cell cycle protein and a candidate bloactive

CT agent and determining the effect on the cell in the presence or absence

CT agent and determining an agonist and antagonist of the cell cycle

CT are useful for generating an agonist and antagonist of the cell cycle

CT proteins, both of which are useful in gene therapy and in screen assays.

CT they are useful in the diagnosis and treatment of cancer. The proteins of

CT the invention are used as vaccines. They are useful for generating

CT polyclonal or monoclonal antibodies to the protein, protein phosphatase type

CT is N303A variant of a novel cell cycle protein, protein phosphatase type

CT consideration but it desired from the present sequence is not shown in the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Query Match

                                                                       á
                                                                                                                                                                                               문
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  The patent discloses cell cycle proteins and nucleic acids encoding them. CC The cell cycle proteins are capable of promoting cell cycle progression or cell cycle arrest. They are capable of promoting or inhibiting DNA repair. The invention also provides methods for screening a bioactive agent capable of modulating the cell cycle or interfering with the binding of a cell cycle protein phosphatase type 5 (PPS). The method involves combining a cell cycle protein and a candidate bioactive agent and determining the effect on the cell in the presence or absence of the candidate agent. Cell cycle proteins bind to Rad9 proteins. They are useful for generating an agonist and antagonist of the cell cycle proteins, both of which are useful in generating an agonist and antagonist of ancer. The proteins of the invention are used as vaccines. They are useful for generating of the invention are used as vaccines. They are useful for generating of the invention anough cell cycle protein, protein phosphatase type CC is H244A variant of a novel cell cycle protein, protein phosphatase type CC is protein, but is derived from the PPS protein shown in Fig 2

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          맑
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     á
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            밁
                                                   The patent discloses cell cycle proteins and nucleic acids encoding them.

Common the cell cycle proteins are capable of promoting cell cycle progression or cell cycle arrest. They are capable of promoting or inhibiting DNA compatitions are capable of promoting or inhibiting DNA compatitions. The invention also provides methods for screening with the compatition of a cell cycle protein phosphatase type 5 (PP5). The compatition of a cell cycle protein phosphatase type 5 (PP5). The compatition of a cell cycle protein and a candidate bioactive method involves combining a cell cycle protein and a candidate bioactive compatition of the candidate agent. Cell cycle protein and a candidate bioactive compatition and determining the effect on the cell in the presence or absence compatition and agents. Cell cycle proteins bind to Rad9 proteins. They care useful for generating an agonist and antagonist of the cell cycle proteins, both of which are useful in gene therapy and in screen assays. Compatition are useful in the diagnosis and treatment of cancer. The proteins of the invention are used as vaccines. They are useful for generating compatition are used as vaccines. They are useful for generating compatition are useful cycle protein, protein phosphatase to the protein phosphatase to the protein some phosphatase compatition and the capacitic phosphatase to the protein some phosphatase that the capacitic phosphat
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Cell cycle protein having phosphatase activity for generating agonist and antagonist e.g. antibodies of the polypeptides, both of which are useful in gene therapy and in screen assays.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Cell cycle protein; DNA repair; protein phosphatase type 5; PP5;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 CC The invention relates to a recombinant DNA construct comprising a CC provide for expression of a polynucleotide encoding a polypeptide from a CC comprising the recombinant DNA construct and a method of producing a CC comprising the recombinant DNA construct and a method of producing a CC transformed plant having an improved property. The plant is a crop plant CC such as maize or soybean. The method of producing a transformed plant the recombinant DNA construct and growing the transformed plant with the CC recombinant DNA construct and growing the transformed plant with the CC improved plant properties and growing the transformed plant properties. CC inference to herbicides, extreme osmotic conditions, pathogens or pests, increased resistance to plant disease, better growth rate by modification of the cell cycle pathway with plant growth regulators, increased resistance to plant disease, better growth rate by modification of the cell cycle pathway with plant growth regulators, increased resistance to plant disease, better growth rate of content, improved yield by modification of protein yield and/or CC content, improved lignin production of protesynthesis or by phosphorus use and/or uptake, by modification of photosynthesis or by croviding improved plant growth and development under at least one stress condition, improved lignin production or improved galactomannan CC production. This sequence represents a bacterial polypeptide used in the scope of the invention. Note: The sequence data for this patent did not cform part of the printed specification but was obtained in electronic CC format from USPTO at secuence at least one stress condition.

The invention relates to a recombinant DNA construct comprising a CC prowder functional in a plant cell, where the promoter is positioned to provide for expression of a polynucleotide encoding a polypeptide from a CC comprising the recombinant DNA construct and a method of producing a CC transformed plant having an improved property. The plant is a crop plant CC such as maize or soybean. The method of producing a transformed plant the recombinant DNA construct and growing the transformed plant with the CC transformed plant by construct and growing the transformed plant, where the CC plynucleotide or polypeptide is useful for improving plant with the complication of the recombinant DNA construct and growing the transformed plant, where the collynucleotide or polypeptide is useful for producing plant properties. CC The recombinant DNA construct is useful for producing plant properties. CC improved plant properties, e.g. improved cold, heat or drought tolerance, contracted to harbicides, extreme osmotic conditions, pathogens or pests, increased resistance to plant disease, better growth rate by modification CC of the cell cycle pathway with plant growth regulators, increased rate of homologous recombination, modified seed oil or protein yield and/or CC content, improved yield by modification of carbohydrate, nitrogen or phosphorus use and/or uptake, by modification of photosynthesis or by conduction, improved plant growth and development under at least one stress condition, improved lignin production or improved galactomannan or production. Note: The sequence data for this patent did not corm part of the printed specification but was obtained in electronic CC format from USPTO at sequence data for this patent did not corm part of the printed specification but was obtained in electronic CC format from USPTO at sequence data for this patent did not corm to the printed specification but was obtained in electronic CC forms at few parts of the corm                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         New recombinant DNA construct comprising a promoter positioned to provi
for expression of a polynucleotide encoding a polypeptide from a
microbial source, useful for producing plants with improved properties.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      pathogen tolerance; pest tolerance; plant disease resistance; cell cycle pathway modification; plant growth regulator; homologous recombination; seed oil yield; protein yield; carbohydrate;

                                                                                                                                                               New isolated polynucleotide and encoded polypeptides, useful in diagnostics, forensics, gene mapping, identification of mutations responsible for genetic disorders or other traits and to assess
The invention relates to isolated polynucleotide (I) and polypeptide sequences. (I) is useful as hybridisation probes, polymerase chain
                                                                                                                                                                                                                                                                                                                                                                                                                                                                              31-MAR-2000; 2000US-00540217.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                reaction (PCR) primers, oligomers, and for chromosome and gene mapping, CC and in recombinant production of (II). The polynucleotides are also used CC in diagnostics as expressed sequence tags for identifying expressed CC genes. (I) is useful in gene therapy techniques to restore normal CC useful for generating antibodies spainst it, detecting or quantitating a CC useful for generating antibodies spainst it, detecting or quantitating a CC polypeptide in tissue, as molecular weight markers and as a food CC supplement. (II) and its binding partners are useful in medical imaging CC of sites expressing (II). (I) and (II) are useful for treating disorders CC involving aberrant protein expression or biological activity. The CC diagnostics, forensics, gene mapping, identification of mutations in CC diagnostics, forensics, gene mapping, identification of mutations CC and to produce other types of data and products dependent on DNA and CC amino acid sequences. ABG00010-ABG30377 represent novel human diagnostic CC amino acid sequences of the invention. Note: The sequence data for this company of the company of the sequence data for this company of the c

Proteins of the invention and DNA sequences encoding them are given in records ABR52568-ABR53903 and ACC66610-ACC61944 respectively. The complexes are obtainable by using a protein as a bait and isolating the set of proteins which is attached thereto from cells. Such protein complexes may comprise up to 30 distinct proteins. Protein complexes of the invention are useful for disgnosing a disease or disorder, or as a target for an active agent of a pharmaceutical, preferably a drug target in the treatment or prevention of a disease or disorder. Note: The sequence data for this patent is not represented in the printed specification, but is based on sequence information supplied by the Buropean Patent Office. The complete
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      New isolated protein complexes useful for diagnosing a disease or disorder, or as a target for an active agent of a pharmaceutical, preferably a drug target in the treatment or prevention of disease disorder.

                                                                                                             S
                                                                                                                                                                                                                                                                                                             S
                                                                                                                                                                                                                                                                                                                                         proteins are selected from given protein complexes, which are not defined CC in the specification. The variants are encoded by nucleic acids that the hybridize to the nucleic acids encoding the proteins under low stringency conditions. The protein complexes are useful as targets for an active useful as drugs targets for the treatment or preventing of a disease or CC disorder. The complexes and methods above are useful in disgnosing or CC for developing a disease or disorder or a predisposition CC for developing a disease or disorder in subject. These are also useful conforments of the complex is useful for the manufacture of a disease or CC disorder. The molecule that modulates the amount, activity or protein CC for the treatment or prevention of a disease or components of the complex is useful for the manufacture of a medicament CC for the treatment or prevention of a disease or disorder. This sequence CC corresponds to a protein of the invention. (Note: the sequence data for this patent did not form part of the printed specification but was considered from the EPO in electronic format).
                                                                                                                                                                                                                                 Query Match

The invention relates to a recombinant DNA construct comprising a promoter functional in a plant cell, where the promoter is positioned to provide for expression of a polymucleotide encoding a polypeptide from a microbial source. The invention also relates to a transformed plant comprising the recombinant DNA construct and a method of producing a transformed plant having an improved property. The plant is a crop plant such as maize or soybean. The method of producing a transformed plant having an improved property comprises transformed plant with the recombinant DNA construct and growing the transformed plant, where the polymucleotide or polypeptide is useful for improving plant properties. The recombinant DNA construct is useful for producing plants with improved plant properties, e.g. improved cold, heat or drought tolerance,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Recombinant DNA construct; transformed plant; improved plant property; cold tolerance; heat tolerance; drought tolerance; herbicide; osmosis; pathogen tolerance; pest tolerance; plant disease resistance; pathogen tolerance; plant disease resistance; cell cycle pathway modification; plant growth regulator; homologous recombination; seed oil yield; protein yield; carbohydrate;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                    New recombinant DNA construct comprising a promoter positioned to provide for expression of a polynucleotide encoding a polypeptide from a microbial source, useful for producing plants with improved properties.
                                                                                                                                                                                                                                                                                                                                                                                                          Claim 1; SEQ ID NO 21980; 122pp; English.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           21-FEB-2002; 2002US-0360039P

This sequence represents a bacterial polypeptide used in the scope of the invention. Note: The sequence data for this patent did not form part of the printed specification but was obtained in electronic format from USPTO at sequence.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         capable of detecting 1000 or more genes from Drosophila. The invention useful in developmental biology and in elucidating cell signalling and cell-cell interactions in higher eukaryotes for the development of insecticides, therapeutics and pharmaceutical drugs. The invention discloses genomic DNA sequences (ABL16176-ABL30511), expressed DNA sequences (ABL01840-ABL18175) and the encoded proteins (ABB57737-ABB72072). The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences
                                                              Recombinant DNA construct; transformed plant; improved plant property; cold tolerance; heat tolerance; drought tolerance; herbicide; osmosis; pathogen tolerance; pest tolerance; plant disease resistance; pathogen tolerance; plant disease resistance; cell cycle pathway modification; plant growth regulator; homologous recombination; seed oil yield; protein yield; carbohydrate; interest to the protein plant growth regulator;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              genes from Drosophila
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   N-PSDB; ABL03835
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Sequence 346 AA;

                                                                                                                                                                                                                                                                                                                                                                                                                          comprising the recombinant DNA construct and a method of producing a comprising the recombinant DNA construct and a method of producing a comprising the recombinant DNA construct and a method of producing a complant service and property. The plant is a crop plant combinant DNA construct and growing the transformed plant with the crecombinant DNA construct and growing the transformed plant, where the polynucleotide or polypeptide is useful for improving plant with the comprises transformed plant, where the polynucleotide or polypeptide is useful for producing plant with the combinant DNA construct is useful for producing plant with the comproved plant properties, e.g. improved cold, heat or drought tolerance, comproved plant properties, e.g. improved cold, heat or drought tolerance, content conditions, pathogens or pests, increased resistance to plant disease, better growth rate by modification of the cell cycle pathway with plant growth regulators, increased rate of content, improved yield by modification of carbohydrate, nitrogen or condition, improved plant growth and development under at least one stress condition, improved lignin production or improved galactomannan composition. Note: The sequence data for this patent did not composition of the printed specification but was obtained in electronic condition under the printed specification but was obtained in electronic composition of the printed specification but was obtained in electronic composition.

polynucleotide consisting of a sequence encoding an amino acid sequence available in electronic form from the US patent office at ftp.seqdata.uspto.gov/sequence.thml?DocID:2004034888. The polynucleotide of the invention are also useful in physical arrays of molecules and as plant breeding markers. The recombinant DNA construct is useful for improving plant tolerance to cold, heat, drought, herbicides, extreme osmotic conditions, pathogens or pests, for manipulating growth rate in plant cells by modification of the cell cycle pathway, for conferring
                                                                                                                                                                                                                                                                                                                                    New recombinant DNA construct, useful for improving plant tolerance cold, heat, drought, herbicides, extreme osmotic conditions, pathogo pests, for conferring increased resistance to plant disease, or for
